

Ecosystems srl. Project co-financed under Tuscany POR FESR 2014-2020

Smart Earth Monitoring (SEM) - Development of an innovative stand-alone low power monitoring system for sending and saving environmental data

The project aim is to create a monitoring system with an wide distribution on the territory.

The monitoring system will be expandable and connected to a data transmission system that allows to create a network of sensors.

The system will allow the monitoring of the territory with a small infrastructure and reduced energy consumption.
